ClearOnc INSIGHTS BY MOFFITT

Cancer is unpredictable and unfair.

A cancer diagnosis immediately creates fear, urgency, and irreversible decision points.

The first diagnosis and first treatment plan often determine:

- clinical outcomes
- patient and family confidence
- long-term cost and care complexity

Where care decisions are made often matters as much as the care itself. When direction is delayed, risk compounds medically, financially, and emotionally.

ClearOnc exists to remove guesswork at the moment it matters most.

— Why This Matters

Cancer is expensive, unpredictable, and unfair.

Cancer decisions are made under pressure. And early choices lock-in outcomes. A cancer ***diagnosis*** immediately ***creates fear***, ***urgency***, and ***irreversible decision points.***

> *"Where care decisions are made — and when expert insight shows up — often matters as much as the care itself."*

First diagnosis determines

- **Clinical outcomes**
- **Patient and family confidence**
- **Long term cost & care complexity**

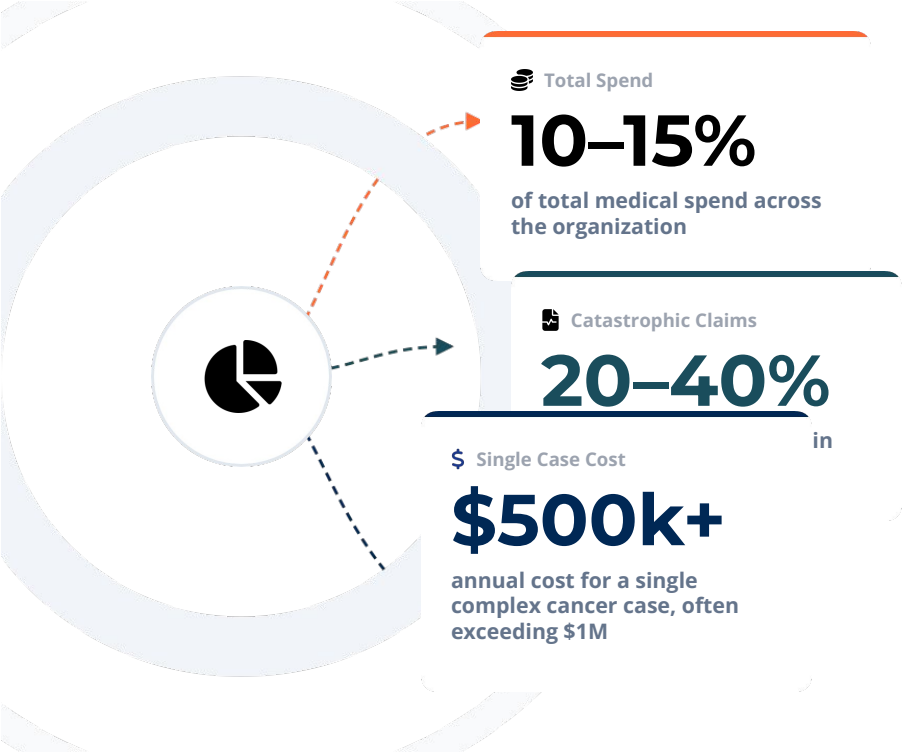
→ **ClearOnc exists to *remove guesswork at the moment it matters most***

— The Business Reality of Cancer

Cancer is the highest risk condition organizations manage.

It's not just another line item. Independent research consistently identifies cancer as a top 2–3 cost driver, creating significant financial volatility and systemic exposure for health plans.

> ***"This is more than edge-case risk. It is systemic exposure."***



Cancer is Expensive, Unpredictable, & Unfair

Cancer is the highest-risk condition organizations manage.

Independent research (JAMA, Milliman, AHIP) consistently shows:

Cancer is a top 2–3 cost driver:

- Represents **10–15%** of total medical spend
- Accounts for **20–40%** of catastrophic claims in self-funded plans
- A single complex cancer case can exceed **$1M**

Cancer costs are volatile because decisions are complex.

Cancer claims show **2–3× higher cost** variability than most chronic conditions. And even small changes in treatment decisions can swing costs by **$10K–$100K+ per case**

Why? Because oncology decisions involve:

- Rapidly evolving therapies
- Nuanced sequencing and dosing
- Subspecialty-specific expertise
- Incomplete or fragmented records

The greatest fear isn't limited to cost.
It's spending +$1M and still losing the employee.

Status Quo Isn't Good Enough.

Expert review frequently changes cancer decisions.

Across peer-reviewed and institutional studies:

- **20–40%** of oncology second opinions result in a meaningful treatment change
- **30–60%** result in refined or corrected diagnoses
- Only **10–15%** are fully confirmed without change

This impacts **therapy selection, sequencing, intensity, and outcomes.**

At the bottom line:

- Misdiagnosis drives **$65M in avoidable cost** per 100,000 employees
- Every delayed or incorrect decision carries **real human consequences**

Expert insight arrives too late.

Traditional oncology second opinions are:

- **Episodic:** disconnected from the ongoing care journey
- **Manual:** reliant on record chasing and nurse summarization
- **Slow:** often 4–6 weeks or longer

Review depends on:

- **Inconsistent** record completeness
- Specialist **availability**
- **Labor-intensive** workflows
- By the time expertise arrives, **treatment paths *and costs*** are already set.

When diagnosis or treatment is wrong, cost skyrocket and lives are lost.

ClearOnc provides expert oncology guidance in days, not months.

ClearOnc replaces manual second opinions with a scalable oncology intelligence platform.

ClearOnc:

- Collects and synthesizes records for you
- Flags missing data
- Routes to Moffitt subspecialist oncologist
- Returns expert guidance in 4–6 days
- Stays engaged throughout the entire cancer journey

ClearOnc goes far beyond providing a second opinion. We stay with the patient through the cancer lifecycle.

Moffitt Matters.

ClearOnc's expertise originates within the world leader in cancer care.

Moffitt Cancer Center is the national leader in cancer prevention, advanced cancer therapies, and treatment of rare cancers

Why Trust Moffitt

- **Best Patient Outcomes:** Outcomes up to **4× better** in select high-acuity cancers
- **Most Advanced Therapies:** Moffitt has the access and expertise to provide the most innovative treatments for even the rarest and most aggressive cancers
- **Most Experience with Rare Cancers:** Deep subspecialization across **more than 50 cancer types**
- **Largest Prevention Investment:** The country's largest investment in preventative care

ClearOnc exclusively translates this expertise from Moffitt's consult room to enterprise scale.

How ClearOnc Works.

Access, Accelerated. Clarity That Scales. Technology With Purpose.

1.

Automated intake & synthesis

Records are ingested, organized, and summarized consistently, eliminating variability and administrative drag.

2.

Moffitt subspecialty review

Each case is routed to the expert best aligned to disease and therapeutic strategy, not availability.

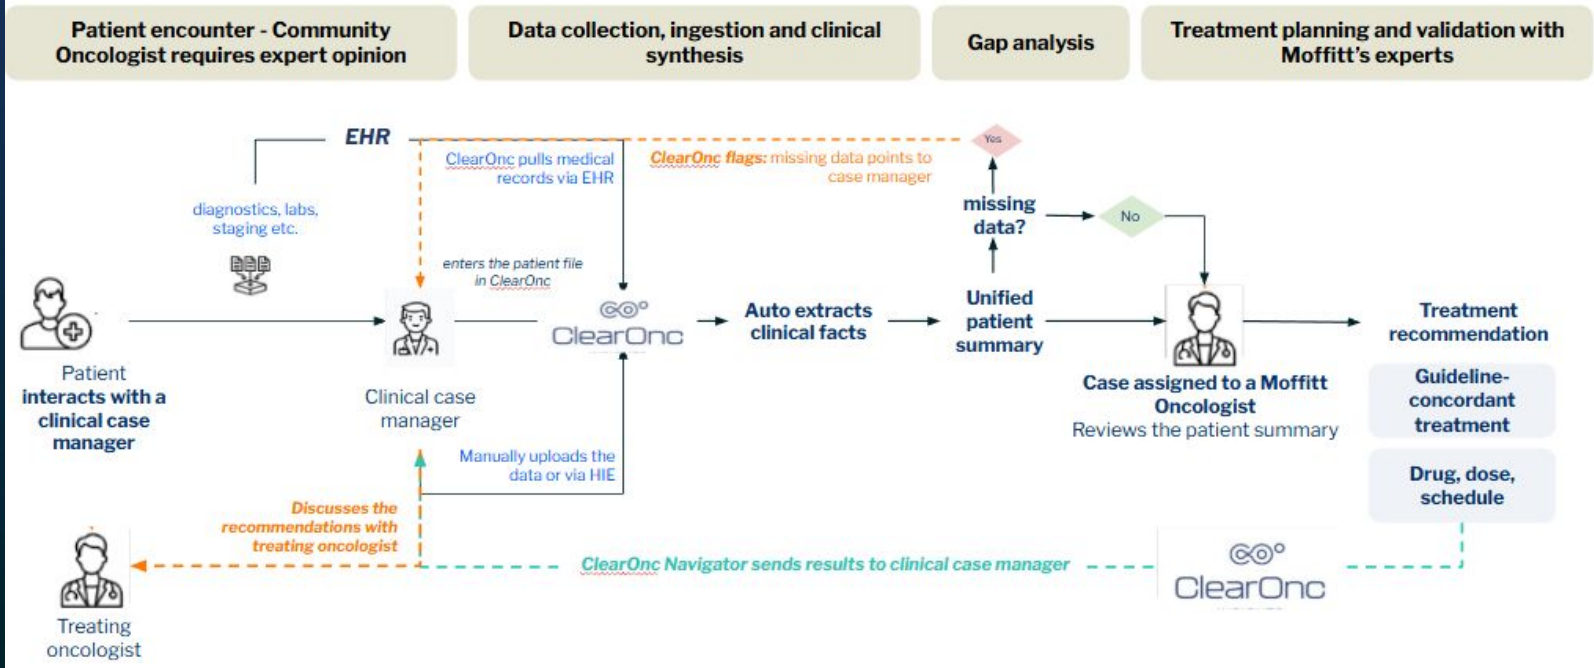
3.

Clear, actionable guidance

Recommendations are searchable, referenceable, and traceable to real-time guidelines, signed off by experts.

Automation removes friction. Physicians retain full authority.

Workflow: Only ClearOnc



How ClearOnc scales expertise without replacing judgement

Care Companion

Expert insight from prevention through diagnosis, treatment, relapse, and survivorship.

Single-Source Clinical Authority

One Moffitt-backed standard — no competing opinions, no ambiguity.

Actionable Variability Reduction

Real-time, traceable guidance that supports providers and patients with confidence.

The Human Journey

"I've just been diagnosed. What now?"

"My cancer has progressed. What options do I have?"

"Is there something else I should consider?"

ClearOnc stays with members through:

- Diagnosis & second opinions
- Additional testing
- Prior authorization management
- Treatment changes
- Throughout treatment
- Remission & survivorship
- Long-term follow-up
- Recurrence or progression
- Clinical trial matching

We don't disappear after one opinion.
We help people get back to life faster with clarity and confidence.

How The AccelerOnc Ecosystem Impacts The Patient Journey

From Uncertainty to Survivorship

DIAGNOSIS | TREATMENT PLANNING | ACTIVE TREATMENT | ONGOING CARE & COORDINATION | SYSTEM LEARNING

ClearOnc

Diagnosis Support & Care Coordination

- *Supports patients and care teams beyond the treatment decision*
- *Improves continuity, access, and confidence across the care journey*

OncoBrain

Treatment Planning & Clinical Decision-Making

- *Expert oncology reasoning at the point of care*
- *Guideline-concordant, patient-specific insights*
- *Reduces unwarranted variation while preserving clinician judgment*

Combined Impact

Longitudinal Care & Learning

- *Connects decisions with downstream care and outcomes*
- *Enables consistent, high-quality oncology care over time*
- *Creates feedback loops for system-level improvement*

Better decisions upstream reduce cost downstream.

Earlier expert insight helps avoid:

- Misdiagnosis
- Unnecessary or ineffective treatment
- Costly downstream reversals

Impact:

- **$65M per 100,000 employees** tied to misdiagnosis
- **$10K–$50K saved** per avoided unnecessary treatment
- **$50K surgery avoided** via a ~$3K expert review

The best return comes from managing the full journey — not isolated events.

Built for predictability and scale

Designed for long-term value, not transactional use.

Service	Per Case	PMPM
Validate diagnosis and treatment against guidelines	$	Included
List of missing diagnostics	$	Included
Clinical Trial Matching	$$	Included
Full case review (expert medical opinion)	$$$	Included
Additional guidance through all future decision points	NA	Included

The ClearOnc Team.

ClearOnc's expertise originates within the world leader in cancer care.
